## **DETAILED ACTION**

### ***Specification***

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over either the European application '467 (Europe) or Virgilio et al. Both patents disclose the basic apparatus including a food processor whose contents may be heated during the processing operation. This is the heart of the invention. The remaining limitations would then have been obvious design choices only as they solve no stated problems. For example, the use of helical blades as the stirring mechanism is well known in the art and of no patentable merit.

Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art (APA) in view of Europe or Virgilio et al. APA is the apparatus discussed in the first few pages of the specification i.e. the use of food processors without heating means. This requires a two step operation to mix/shred material and

heat it. Europe and Virgilio et al both solve this problem by providing apparatus to perform these operations simultaneously. In order to perform the operations simultaneously, it would have been obvious for one of ordinary skill in the art to modify APA by providing heating means within the processor, taught to be desirable by both Europe and Virgilio et al. This is the heart of the invention. The remaining limitations would then have been obvious design choices only as they solve no stated problems. For example, the use of helical blades as the stirring mechanism is well known in the art and of no patentable merit.

### ***Conclusion***

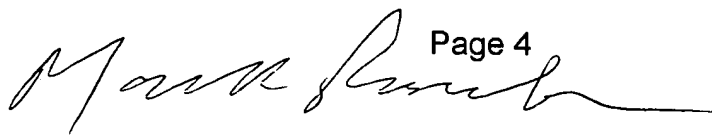

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
